

## Resource Investor Monthly

*The Resource Investor Monthly is produced by Ascenta Capital Partners Inc., a leading provider of outsourced investor relations to public companies in Western Canada. Among Ascenta's client roster are a number of high-quality junior resource companies that are active throughout the world. The Resource Investor Monthly provides a brief overview of current developments relating to these companies. This information is not intended to be complete and does not constitute an offer or solicitation to buy or sell any securities discussed herein in any jurisdiction. Investors should obtain advice based on their own individual circumstances before making an investment decision. For additional information on any one of these companies, readers are encouraged to contact the investor relations representative noted or visit the company's website.*

### Western Wind in Negotiations for Purchase of 120 MW of Wind Turbine Generators; Closes Private Placement

**November 12, 2007** - Western Wind Energy Corp. (TSXV: WND; Frankfurt: WKN 157027; WWE) announced that negotiations have commenced with several major wind turbine manufacturers for the delivery of up to 120 MW of nameplate wind turbine generators in the Mega watt and Multi Mega watt class. The wind turbines will be deployed on Western Wind Energy's Windstar project located in Tehachapi, California. Delivery is anticipated in late 2008 and commissioning is anticipated in early 2Q 2009. Windstar has received a construction permit number from Kern County and Western Wind has completed all archeological, biological, soils analysis and visual impact studies with a conclusion of "no significant impact". Windstar is located within a project area of over 5,000 wind turbine generators delivering an annual output of 1.4 billion kilowatt hours from over 700 MW of nameplate capacity.

Western Wind Energy also closed a non-brokered private placement announced October 2, 2007. The company issued 2,061,400 units at a price of \$1.40 per unit. Each unit is comprised of one common share and one share purchase warrant. With respect to the first tranche of 2,041,400 units, one warrant will entitle the holder to purchase one common share at a price of \$1.75 per share until October 19, 2009. The hold period for these units and the underlying securities expires on February 20, 2008. With respect to the second tranche of 20,000 units, one warrant will entitle the holder to purchase one common share

at a price of \$1.75 per share until November 9, 2009. The hold period for these units and the underlying securities expires on March 10, 2008.

**Western Wind Energy Corp.** Western Wind Energy is in the business of acquiring exceptional land sites, capital and technology for the production of electricity from wind energy.

### Riverstone Intersects 64 Metres of 2.0 g/t Gold at Kao

**November 15, 2007** - Riverstone Resources Inc. (TSXV:RVS; Frankfurt: WKN A0MX39; 3RV) reported initial results from the Phase 3 drill program on its Kao gold permit in Burkina Faso, West Africa.

Results include a 64-metre thick intersection from 6 metres to 70 metres of 2.00 grams per tonne (g/t) gold in Hole 062. The hole averaged 1.36 g/t gold over the whole length from 0 metres to 100 metres, where the hole was stopped in mineralization.

Additional selected gold intercepts recently received include 26 metres of 1.77 g/t gold in Hole 063, 26 metres of 2.05 g/t gold in Hole 068,

22 metres of 1.79 g/t in Hole 069 and 24 metres of 1.73 g/t in Hole 070.

The Kao permit is contiguous with the company's Rambo permit and also the Goulagou permit, which is held under option. Riverstone is undertaking further work programs, including RC drilling, on the Goulagou, Rambo and Kao permits, with the objective of defining a combined resource of at least 1,000,000 ounces of gold in 2008.

**Riverstone Resources Inc.** has focused on West Africa because the region is known to host world-class gold deposits, including the Obuasi Mine and Bibiani Deposits in Ghana; and the Sadiola and Morilla Deposits in Mali. Riverstone is concentrating most of its efforts in Burkina Faso, a politically stable country adjoining Ghana, because the belts of favorable rocks that host all the major gold deposits in Ghana continue on into Burkina Faso.

### Mirasol Announces Commencement of Drilling at the Claudia Gold-Silver Project

**November 1, 2007** - Mirasol Resources Ltd. (TSXV:MRZ, Frankfurt: WKN AOF4Z5; M8R) announced the start of a minimum 3,500-metre

drill program being undertaken by its joint venture partner, Hochschild Mining Holdings Ltd., on its 100%-owned Claudia gold-silver project. The program is designed to scout drill the first round of targets defined on the property to date.

The initial stage of the program is aimed at confirming the continuation of AngloGold Ashanti's Cerro Vanguardia vein deposit towards the south, where multiple veins continue in outcrop onto Mirasol's Claudia project claims. The projection of the vein zone is concealed under an extensive area of shallow, post-mineral gravel cover.

The 3,500 metres of slated drilling will test six targets, ranging from outcropping zones of gold-silver mineralization to magnetic and gradient array IP geophysical targets. Scope for an additional 1,000 meters of drilling has been built into the program if initial results are encouraging.

**Ecuagold Resources Ltd.**  
*Ecuador Gold S.A.*

### Ecuagold Begins Work on Ecuador's Largest Historic Silver Producer

**November 1, 2007** - Ecuagold Resources Ltd. (TSXV: EGR; Frankfurt: WKN A0MJ3A; EAG) reported the results of a preliminary exploration program on the Silver 1 concession at the San Bartolomé Project, Ecuador's largest historic silver producer, with reported historic grades of 20 oz/t Ag, 1.15% Pb and 2.9% Zn.

The program consisted of preliminary mapping of the concession and sampling of available outcrops, waste dumps and tailings from historic mining activities. Grab sampling of mineralized vein material from the waste dumps supported the project's reported historic high-grades, with the assays returning 40.9 to 71.7 oz/t Ag; 2.87 to 5.15 g/t Au, 0.84 to 4.36% Pb and 2.66 to 10.84% Zn. Full results can be viewed on the company's website.

The Company is planning to follow up this initial program with topographic surveying, detailed

geological and structural mapping, aerial photograph interpretation, geochemistry, geophysics and trenching, leading to a future drilling program.

The San Bartolomé Project is located about 20 km southeast of Cuenca, Ecuador's third largest city, and corresponds to a high-grade epithermal Ag-Pb-Zn vein system. Excellent infrastructure is present in the Project area. The Project consists of the Silver 1 concession (3,108 hectares) and three pending contiguous concessions - Silver 2, 3 and 4 (approximately 6,309 hectares).

Ecuador's Ministry of Energy and Mines ("MEM") approved Ecuagold's Environmental Impact Study ("EIS") for the Silver 1 concession in May 2007. The company presently has MEM approved EIS filings for the Molleturo, Curiplaya and San Bartolomé Projects.

**Ecuagold Resources Ltd.** is engaged in the acquisition, exploration and potential development of primarily precious metals properties in Ecuador.

**Mexican Silver Mines Ltd.**

### Mexican Silver Mines Acquires the Voladora Mine

**November 19, 2007** - Mexican Silver Mines Ltd. (TSXV: MSM; Frankfurt: WKN A0MSLE; MS2) completed a Letter of Intent ("LOI") to acquire a 100% interest in the Voladora Mine. The mine, which covers an area of 272 hectares, is situated two kilometers to the northwest of Mexican Silver's La Iguana Mine.

The Voladora Mine is in one of the largest and most geologically complex mining districts on any of the Company's concessions. Numerous surface and subsurface intrusive bodies are present in the area and the mineralization has been found to be related to chemically favorable carbonate horizons in proximity to a central intrusive complex.

The mine consists of a number of adits and several shafts extending to a depth of 30 meters and was in production from 1758 to 1808, when the historical data indicate that a collapse led to the abandonment of this mining district.

Mineralization at Voladora consists of carbonate replacement deposits (CRD) and stockwork in the adjacent intrusive bodies. Additionally, intrusive sills and dikes are associated with garnet skarns hosted in the adjacent calcareous rocks. Mineralization occurs as sulfides including sphalerite and argentiferous galena, with a gangue of barite, quartz, calcite, pyrite and iron oxides. The initial exploration plan at Voladora is to implement a detailed mapping and sampling program of the surface and underground workings and to mount an aggressive diamond drilling phase at the mine upon completion of the drilling at the Iguana mine to the southwest.

**Mexican Silver Mines Ltd.** is a junior resource company developing three former silver producing properties in northeastern Mexico.

### Update on Exploration - Snegamook Property, Labrador

**November 26, 2007** - Silver Spruce Resources Inc. (TSXV: SSE) provided an update on exploration work on its optioned Snegamook Lake Property, in the central mineral belt (CMB) of Labrador. RadonEx (radon gas) and soil geochemical surveys, prospecting, linecutting and a limited drilling program have been carried out.

Four drill holes over a two-kilometer strike length along the Two Time Trend intersected intrusive and older gneissic rocks with sections of structurally controlled, brecciated monzodiorite, similar in style to the Two Time mineralization, which carried moderate to strong chlorite, hematite and carbonate alteration and uranium mineralization in holes SN-07-02 and SN-07-03. Values ranged from

50 to 1,034 ppm U308 with the best section averaging 189 ppm U308 (0.378 lbs/ton) over 24 meters, similar to values located in the Phase 1 drill program on the Two Time Zone itself.

Holes SNNM-07-01 and SNNM-0702, spaced 80 meters apart, targeted the Near Miss showing. Both holes intersected one-meter intervals of uranium mineralization grading from 235 to 1,534 ppm U308.

The results from the first pass drilling are positive, confirming significant uranium mineralization is located on the property. Further drilling is planned when a drill rig becomes available. More complete drill results can be viewed on the company's website.

**Silver Spruce Resources Inc.** is a junior mining exploration company primarily focused on uranium in the CMB of Labrador, Canada.

#### Primary Metals Acquired by Sojitz Corporation

**October 2, 2007** - Primary Metals Inc. (TSXV: PMI; Frankfurt: WKN A0BLR7; P5R) announced that 13,446,000 common shares of Primary (the "Primary Shares") were validly deposited pursuant to the offer made by Sojitz Tungsten Resources, Inc. to acquire all of the Primary Shares. Sojitz has announced that, as all conditions of the offer have been satisfied, it will take up and accept for payment all Primary Shares so deposited, which, together with the Primary shares already owned by Sojitz, represent approximately 95.34% of the outstanding Primary shares on a fully-diluted basis.

Under the Offer, Primary shareholders will receive C\$3.65 in cash per Primary share. In aggregate, Sojitz will pay approximately C\$49 million as consideration for Primary Shares tendered to date.

Sojitz has now taken effective control of Primary, and is working with management of Primary to integrate Primary's operations with those of Sojitz as soon as possible.

**Primary Metals Inc.** owns a 100% interest in the profitable Panasqueira Tungsten mine in Portugal through its subsidiary, Beral Tin and Wolfram.

#### High-Grade Silver, Copper and Molybdenum on Red Ridge Property

**November 29, 2007** - Prize Mining Corporation (TSXV: PRZ; Frankfurt: WKN A0D9T0; MQS1) announced assay results for rock grab and chip samples collected on its newly acquired Red Ridge Property, located near Carcross in south-western Yukon. Widespread precious and base metal mineralization occurs throughout the claims, which are centred on a prominent gossanous ridge. Silver assay values up to 8,662 g/t (278.5 oz/t) and copper assay values up to 2.144% have been obtained from chip samples collected from the East Zone.

Rock chip samples were collected across the true width of mineralizing structures wherever possible. Grab samples were collected to represent a certain rock or mineralization type or alteration assemblage. Samples were submitted to ACME Laboratory Ltd. in Vancouver for gold and silver fire assay and 30 element ICP analyses. ACME Laboratory Ltd. is completely independent of Prize.

Highlights from some of the previously identified zones were as follows.

**Miller Zone - grab sample**  
 153 g/t silver, 0.236% copper and 8.46% lead.

**Saddle Zone - grab sample**  
 3,387 g/t (108.9 oz/t) silver, 63.7% lead, 0.384% copper and 4.12 g/t gold.

**East Zone - chip samples**  
 6,082 g/t (195.6 oz/t) silver and 2.067% copper over one metre and 8,662 g/t (278.5 oz/t) silver and 2.144% copper over 20 centimetres.

**Moly Zone - grab sample**  
 0.08% molybdenum, 0.311% copper and 71 g/t silver.

**Prize Mining Corp.** currently has three active projects in Canada: The Pine Creek Bedrock Project located in Atlin, British Columbia, the Muskox PGE Project in Nunavut, and the Red Ridge Property in the Yukon.

MINDORO  
 RESOURCES LTD.

#### Continuing Excellent Drill Results from Agata Nickel Laterite Project

**November 1, 2007** - Mindoro Resources Ltd. (TSXV: MIO; Frankfurt: WKN 906167; OLM) reported results from eleven drill holes on one long cross section in the northern laterite zone on the Agata project, Philippines. The limonite horizon averages 1.01 percent nickel and 38.47 percent iron over an average thickness of 2.12 meters. The underlying saprolite horizon averages 1.20 percent nickel over an average thickness of 5.37 meters.

Mineralization grades and thicknesses meet company expectations, and are in line with requirements for direct shipping grade material for ferro-nickel feedstock for which demand remains strong. The Agata project has strong competitive advantages, with good grades, just two to three kilometers from tide water, with corresponding low haul distance and costs, and only two days shipping from China. Mindoro has recently received several expressions of interest in its nickel laterite as potential feedstock for a new generation of HPAL nickel processing plants which are planned in the region.

As reported on March 13, 2007, the current objective on the Agata northern nickel laterite project is to define a NI 43-101 compliant resource adequate, initially, for three to five years of production. Mindoro has a target production date of the first half of 2008, and would ramp up production to one million tonnes or more per year thereafter, depending on market demand.

**Mindoro Resources Ltd.** is carrying out resource delineation at the Kay Tanda epithermal gold-silver prospect and has identified 22 porphyry copper-gold prospects and a nickel laterite prospect in the Philippines.

#### Dynasty Gold Closes Second Tranche of Private Placement

**November 23, 2007** - Dynasty Gold Corp. (TSXV: DYG; Frankfurt: WKN 550895; D5G) closed a 3,000,000 unit private placement for gross proceeds of \$300,000. Each unit consists of one common share and one common share purchase warrant. Each common share purchase warrant entitles the holder to purchase one common share at C\$0.15 on the first anniversary from the date of closing and C\$0.20 on the second anniversary from the date of closing. Finder's fees and warrants may be payable. The shares and warrants issued are subject to a four-month hold from the date of closing of the private placement.

The Company will use the proceeds of the private placement to fund Hatu exploration program and for new project evaluation currently underway in the Qinghai Province of People's Republic of China.

**Dynasty Gold Corp.** is a leading Canadian gold exploration company in China with three highly

prospective gold properties currently being explored through partnerships with AngloGold Ashanti and Avocet Mining.

#### FirstGrowth Announces Third Quarter Results

**November 30, 2007** - FirstGrowth Exploration & Development Services Corp. (TSXV: FGC; Frankfurt: WKN A0MKVS; G8Q) announced third quarter financial results.

"I am pleased to announce gross revenues for the third quarter in excess of \$2.6 million (\$0.082 per share), and revenue for the nine months ended September 30, 2007 of over \$12 million (\$0.422 per share) - comfortably in line with the company's projected guidance. We currently have a strong order book, a steady flow of incoming bids from our clients, and continued interest in our process - all of which are expected to be reflected in our year end results," stated Gil Schneider, president and CEO. "We have done what we set out to do: We have sustained a high level of growth, approaching 100 percent year over year. We have broadened our reach in domestic and international markets. We have successfully accomplished all this while maintaining a positive EBITDA of \$1,289,646 for the nine months ended September 30, 2007."

**FirstGrowth Capital Inc.** is an oil, gas and mineral services company. The company's primary acquisition is Kinetex Inc. a digital full wave seismic acquisition company servicing the oil & gas and mining industries.
