

Resource Investor Monthly

The Resource Investor Monthly is produced by Ascenta Capital Partners Inc., a leading provider of outsourced investor relations to public companies in Western Canada. Among Ascenta's client roster are a number of high-quality junior resource companies that are active throughout the world. The Resource Investor Monthly provides a brief overview of current developments relating to these companies. This information is not intended to be complete and does not constitute an offer or solicitation to buy or sell any securities discussed herein in any jurisdiction. Investors should obtain advice based on their own individual circumstances before making an investment decision. For additional information on any one of these companies, readers are encouraged to contact the investor relations representative noted or visit the company's website.

GGL DIAMOND CORP.

GGL Discovers Nickel while Exploring for Diamonds

April 4, 2007 - GGL Diamonds (TSXV: GGL) reported that in the course of diamond exploration activities in the Winter Lake area in the Northwest Territories, it made a discovery of nickel mineralization.

A number of factors, detailed in the complete text of this news release (visit the company's website at www.ggldiamond.com), point to this discovery as possibly being the first new nickel area discovered in Canada since Voisey's Bay. GGL has worked to confirm its initial geological assessment of the significance of this discovery and to stake additional claims to cover the most prospective portions of the belt. The staking has now been completed and GGL's claims cover an area approximately 80 km X 20 km.

Attention was first directed to the area of the nickel in sulphides found in a grab sample collected from the edge of a 60 m bX 20 m outcrop of serpentinite, an altered ultramafic rock. The sample was assayed and the results were noted. The ICP-ES (total nickel) returned 0.447% Ni, 0.586% Cr2O3 and 0.73% total sulphur; the ICP-MS (nickel sulphide content) returned 0.41% Ni, 178.1 ppm Cu and 214.9 ppm Co.

These and other results prompted a re-examination of exploration data for the remainder of the claim area, including soil samples and electromagnetic signatures. Current evidence confirms that additional exploratory work is warranted. GGL believes it has a major nickel area and will be implementing a plan of exploration to test new targets.

GGL Diamond Corp. is a junior diamond exploration company focused on the Slave craton in Canada's Northwest Territories. Through its unique use of geological information and computer technology, a rigorous selection of claims and a disciplined approach to exploration, GGL has built an enviable portfolio of properties.

Normabec Commissions Pre-Feasibility Study on Real de Catorce Silver Property

April 23, 2007 - Normabec Mining Resources Ltd. (TSX: NMB; Frankfurt: WKN A0JC54; N6M) reported it had signed a Letter of Intent with Constructora Gardilicic (Gardilicic), a major underground mining contractor in Chile, for the preparation of a pre-feasibility study on the 100% owned Real de Catorce Silver Project.

Within the next three months, Normabec anticipates the completion of resource estimates on the underground material left in place by previous operators; on the three tailings piles and on the surface material recently evaluated for open pit possibilities, metallurgy mine and mill design.

Upon positive results, Gardilicic will have the right to become the underground mining contractor on the various resources. Should Gardilicic exercise its

right to operate, Normabec and Gardilicic will enter into a sharing agreement whereby Gardilicic shall be entitled to receive 15% of the net earnings generated by the block of resources defined in the pre-feasibility study.

Normabec Mining Resources Ltd. is a junior mining exploration company actively exploring high-quality gold and silver assets in Canada and Mexico.

FirstGrowth Capital Inc. Closes \$2.7M Financing

April 19, 2007 - FirstGrowth Capital Inc. (TSXV: FGC) announced it had completed the second and final tranche of a non-brokered convertible debenture private placement financing for total gross proceeds of \$2.7 million. The company has raised over \$12 million over the past fifteen months for the purchase additional equipment and for working capital.

Terms of the debenture:

The non-brokered convertible debenture private placement consists of 2.7 million units of the common shares of the company at a price of \$1.00 per unit. Each unit consists of one transferable debenture and one-half of one share purchase

warrant. One whole warrant entitles the holder to purchase an additional share in the company for \$1.75. The terms of the debenture are described in full on the corporate website.

www.firstgrowthcapital.ca

FirstGrowth Capital Inc. is an oil, gas and mineral services company. The company's primary acquisition is Kinetex Inc. a digital full wave seismic acquisition company servicing the oil & gas and mining industries.

Great Quest Intersects 1.3M of 98.86 g/t Gold at Djambaye 2 Zone

April 13, 2007 - Great Quest Metals Ltd. (TSXV: GQ; Frankfurt: WKN 657332; GQM) announced results from six diamond drill holes on the 4,000 metre-long Djambaye 2 gold zone, Kenieba concession, western Mali, West Africa.

Highlights included:

Hole KN 46-07 intercepted 4.5 m grading 3.58 g/t gold; including 1.0 m grading 8.51 g/t gold

Hole KN 49-07 intercepted 5.8 m grading 2.45 g/t gold; including 1.0 m grading 5.27 g/t gold

Hole 50-07 intercepted 7.6 m grading 20.44 g/t gold; including 1.5 m grading 98.86 g/t gold

A summary of results from all six drill holes can be found on the company's website.

www.greatquest.com

These holes were part of Phase 1 of the 2007 drill program, in which one hole was drilled under each of the 11 cross-sections drilled over a length of 1,100 metres during the 2005 and 2006 drill programs.

In 2006, an initial study, completed by Carl Verley (P. Geol.) on the Djambaye 2 gold zone, gave an inferred mineral resource of 928,787 tonnes of 4.48 g/t gold based on holes drilled in 2005 and 2006. At the conclusion of the 2006 program, the depth of the deepest intersection of the zone along the

cross-sections ranged from 55 to 105 metres. During Phase 1 drilling, the depth of the deepest intersection of the zone ranged from 110 to 160 metres and the zone remains open to depth.

Great Quest Metals Ltd. is a junior gold company focused on the acquisition, exploration and development of gold prospects in Mali, West Africa. The company holds concessions covering 350 sq km within a 25- by 200- kilometre belt in western Mali that hosts 30 million ounces of gold resources.

crowflight minerals inc.

Crowflight Files Completed Bankable Feasibility Study on SEDAR

April 24, 2007 - Crowflight Minerals Inc. (TSXV: CML; Frankfurt: WKN 358036; CMI) filed the completed Bankable Feasibility Study (BFS) report on SEDAR (www.sedar.com), which describes the results from the recently announced updated BFS. This study describes the various components of the technical and economic study regarding the development, mining and processing of the Bucko Deposit nickel ore via an underground mine and surface concentrator operation.

What is of particular interest in the BFS report is that it describes planning and activities already underway to further enhance the confidence, performance and potential economic return from the Deposit, including activities to enhance confidence in an expanded through-put scenario.

These activities include:

Drilling to enhance the confidence in the resources and reserves within the Deposit;

Nature and distribution of mineralization;

Enhanced geotechnical characteristics of the host rock in which development is to take place and of the ore to be mined;

Definitive mine lay-out;

Improved metallurgical processes and concentrator flow sheet efficiencies;

Studies to consider the merits and potential of more efficient operating parameters, particularly the application of a paste backfill plant and a ramp from surface to underground ramp system; and

Expanded through-put and efforts to expand the resources and reserves as extensions to the known Deposit.

The study recommends that these activities continue to be advanced and that results from this work be used to enhance the confidence, performance and potential through-put of the project coincident with project development activities.

Crowflight Minerals Inc. is a junior mining exploration and development company active in Manitoba and Ontario, Canada. The company is currently focused on construction of the Bucko Lake Nickel Mine, which is scheduled to start production in Q2 2008.areas.

Drilling to Resume at Two Time Zone

April 25, 2007 - Silver Spruce Resources Inc. (TSXV: SSE; Frankfurt: WKN A0JJTF; S6Q) and Universal Uranium Ltd. (TSXV: UUL) announced a minimum 8,000-metre contract for diamond drilling on the Two Time Zone. The contract was awarded to Lantech Drilling Ltd. of Dieppe, New Brunswick and mobilization to the CMB NW property is planned for early May. Lantech will use an "LDS-1000" drill rig with a depth capacity of 900 metres to test the extensions of the Two Time Zone along strike and to depth. The definition/infill drilling on the Two Time Zone will target the known mineralization and give an indication of the size and grade of the zone. Drilling will also be carried out to the north and south of the zone along strike.

Two previous drilling campaigns on the Two Time Zone, in December 2006 and February 2007, intersected uranium mineralization in 11 of 12 drill holes and outlined a significant mineralized zone. This zone, which remains open along strike and to depth, was traced for 300 metres and to a depth of 250 metres. The zone had values of 0.11% U3O8 over 30 metres within a wider zone of mineralization containing 0.052% U3O8 over 107 metres (refer to news release dated March 1, 2007). The uranium mineralization is hosted in an altered, brecciated and fractured, felsic intrusive, of monzonitic to monzodioritic composition, which carries extensive hematite, chlorite, and carbonate. The zone appears similar to large, iron oxide copper gold (IOCG) style, hematite breccia deposits, such as Olympic Dam in Australia, the world's largest uranium deposit.

Silver Spruce Resources Inc. is a junior mining exploration company primarily focused on uranium in the CMB of Labrador, Canada. With over 5,000 claims totalling more than 1,250 square kilometres, Silver Spruce is the second largest land holder in one of the world's premier emerging uranium districts.

Update from Agata Nickel Laterite Project

April 19, 2007 - Mindoro Resources Ltd. (TSXV: MIO; Frankfurt: WKN 906167; OLM) provided an update on the Agata nickel laterite project, where five coring drill rigs are in operation.

To date, 25 drill holes have been completed for a total of 714 meters. Holes are being drilled on 50 meter centers. The nickel laterite horizons have been substantially thicker than anticipated, increasing tonnage potential and expanding market potential for the higher-value nickel material in the saprolite horizon. The upper limonite horizon has averaged 10.23 meters in thickness, while the saprolite horizon below has averaged 15.94 meters in thickness. Average thickness of the entire nickel

laterite horizon is 26.17 meters, considerably exceeding expectations and increasing overall tonnage potential of the project. The substantially thicker intercepts of the saprolite horizon in the latest drill results is particularly encouraging, as the saprolite characteristically has relatively higher nickel grades than the overlying limonite horizon.

The first assay results are expected in about ten days and will be reported on a section by section basis. It is expected that drilling will be completed and a resource estimate commenced by mid-May. Topographic surveying is nearing completion and planning has been initiated for a haul road to the nearby coast. Discussions are in progress with environmental consulting groups to complete the Environmental Compliance Certificate, a pre-requisite for production. Mindoro continues to receive expressions of interest from China and, more recently, India, to supply nickel and ferro-nickel feedstocks.

Mindoro Resources Ltd. is a Tier 1 Issuer trading on the TSX Venture Exchange and the Frankfurt Stock Exchange. In addition to resource delineation being carried out at the Kay Tanda epithermal gold-silver prospect, the company has identified 22 porphyry copper-gold prospects and a nickel laterite prospect in the Philippines and has an aggressive strategy of drilling multiple targets in 2007.

Prize Purchases Knelson Gravity Processing Plant

April 3, 2007 - Prize Mining Corporation (TSXV: PRZ; Frankfurt WKN A0D9T0; MQS1) announced it had commissioned Knelson Gravity Solutions to build a 3-cycle processing plant for the bulk sampling program to be conducted on the Yellowjacket Zone of Prize's Atlin Gold Property in northwestern British Columbia.

The state-of-the-art plant will utilize three Knelson concentrators of different diameters to produce a

high-grade gold concentrate. The final concentrate will be separated using a Gemini 20 table. The plant will process 12 tonnes per hour and will operate 24 hours per day during the processing stage. The extraction, crushing and processing of the entire 10,000 tonne bulk sample is anticipated to be completed by late September 2007.

Metallurgical tests indicate that the Knelson processing plant will be able to gravity separate approximately 70% of the gold in the bulk sample. An extensive head grade and tail sampling program will be ongoing throughout the processing period, allowing calculation of the actual recoveries and true gold grades of the sample blocks.

Prize Mining Corp. is a Tier One company on the TSX Venture Exchange. The company is dedicated to the exploration, discovery and development of gold and other precious metal deposits. Prize currently has two active projects in Canada: The Pine Creek Bedrock Project located in Atlin, British Columbia, and the Muskox PGE Project in Nunavut, Canada.

Mirasol Resources Announces \$2.0M Non-Brokered Private Placement

April 13, 2007 - Mirasol Resources Ltd. (TSXV: MRZ; Frankfurt: WKN AOF4Z5; M8R) announced the undertaking of a non-brokered private placement consisting of up to 2,000,000 units at a price of \$1.00 per unit for a total of \$2.0 million. Each unit shall consist of one common share and one share purchase warrant exercisable at a price of \$1.50 per share for a period of two years from closing, subject to an exercise acceleration provision.

The proceeds of this private placement will be used to fund Mirasol's exploration programs in Argentina and Chile, for corporate purposes, and for general working capital. The transaction is subject to the acceptance of the TSX Venture

Exchange, and all securities will be subject to a four-month hold period.

Mirasol Resources Ltd. is focused on the discovery and acquisition of new, high-potential precious metals deposits in the Americas. Mirasol Argentina SRL, Mirasol's wholly-owned subsidiary, currently holds 100 percent of the rights to eight exploration projects covering more than 145,000 hectares in Santa Cruz Province in the Patagonia region of southern Argentina.

DYNASTY
GOLD CORP.

Dynasty Announces \$1.5M Exploration Program at Red Valley Project, China

April 30, 2007 - Dynasty Gold Corp. (TSXV: DYG; Frankfurt: WKN 550895; D5G) announced the details of a US\$1.5 million exploration program at the Red Valley Project in Qinghai Province, China, that will include diamond drilling, ground magnetic surveying and geological studies. The program will be funded by AngloGold Ashanti and will be conducted by a joint Dynasty - AngloGold team.

The US\$1.47 million budget includes:

- 1) Geological mapping to constrain Red Valley Duplex system and Xigou drill targets identified at the end of 2006 (1:5,000 to 1:2,000 scale).
- 2) Drill testing of priority targets at the Red Valley and Xigou prospects, including up to 5,000m of diamond drilling.
- 3) Extending the ground magnetic survey across current drill targets.
- 4) Ground truthing and following-up of regional geo-chemistry anomalies.

The Red Valley project is situated within the Qilian fold belt, a NW-SE trending assemblage of late

Proterozoic to Ordovician aged sediments and volcanics. Major structural trends within the region are NW-SE with less topographically pronounced EW and NE trending cross structures.

An overview of the 2006 drill program results and plans for 2007 are included in a presentation compiled by AngloGold that is available in the Investor - Presentation section of Dynasty's website:

www.dynastygoldcorp.com

Golden Band Receives Positive Preliminary Economic Assessment on La Ronge Gold Projects

April 19, 2007 - Golden Band Resources Inc. (TSXV: GBN) reported that a positive Preliminary Economic Assessment ("PEA") had been completed on its La Ronge Gold Belt Bingo, Komis, and EP gold deposits in northern Saskatchewan.

According to the report, the La Ronge Gold Project operating plan has a high probability of economic viability; can be brought into production in less than one year from project inception; is highly sensitive to metal prices; and is moderately sensitive to changes in operating and capital costs.

The PEA is based on a four-year mining plan with production at the rate of 700 tonnes per day using the Company's Jolu mill. Mine life could be increased significantly beyond this initial period with the realization of resource potential on a number of nearby exploration properties currently being drilled and/or evaluated.

The Komis, EP, and Bingo deposits have a measured and indicated potentially mineable resource of 652,000 tonnes, in addition to which there are 163,000 tonnes in the inferred classification.

Golden Band Resources is focused on the long-term, systematic exploration and development of its La Ronge Gold Belt properties. Since 1994, the company has assembled a land package of more than 750 square kilometers, including 10 known gold deposits, four former producing mines and a licensed gold mill.
