

Resource Investor Monthly

The Resource Investor Monthly is produced by Ascenta Capital Partners Inc., a leading provider of outsourced investor relations to public companies in Western Canada. Among Ascenta's client roster are a number of high-quality junior resource companies that are active throughout the world. The Resource Investor Monthly provides a brief overview of current developments relating to these companies. This information is not intended to be complete and does not constitute an offer or solicitation to buy or sell any securities discussed herein in any jurisdiction. Investors should obtain advice based on their own individual circumstances before making an investment decision. For additional information on any one of these companies, readers are encouraged to contact the investor relations representative noted or visit the company's website.

Redhawk Intersects High Grades in Breccia Pipes

March 19, 2008 - Redhawk Resources Inc. (TSXV: RDK; Frankfurt: WKN 254467; QF7) announced the first results of angle core drill holes in two breccia pipes as part of an ongoing 70,000 foot Phase II drill program at the Copper Creek project. The drilling results include "near surface" higher grade intervals such as 5.1% Cu over 135 feet (including 7.67% Cu over 68 feet), 4.15% Cu over 57 feet, and 3.33% Cu over 138 feet. Please visit the company's website for a complete summary of results from the Copper Prince and Copper Prince East breccias located less than 200 feet apart and less than 1,100 feet north of the exploration decline portal site currently in the permitting process.

Assays are pending on three additional angled core drill holes on the Copper Prince breccias and three angled core drill holes on the Globe and Globe South breccias approximately 1,300 feet northwest of the Copper Prince area.

Redhawk Resources Inc. is an exploration and development company with primary focus on the accelerated development of its advanced stage Copper Creek copper-molybdenum project in San Manuel, Arizona. The Company also has two gold/silver properties of merit in Nevada.

Canaco Commences Drill Program at Handeni Gold Project, Tanzania

March 26, 2008 - Canaco Resources Inc. (TSXV:CAN) announced the initiation of exploration drilling at the 100%-owned Handeni gold project located in the United Republic of Tanzania.

The drilling at Handeni will assess gold mineralization that is currently the object of intensive artisanal mining along a WNW trend over a known strike length of 6.25 km. The Handeni Gold Trend has significant gold mineralization at four separate prospects over the 6.25 km of strike, including Magambazi, North Magambazi, Semwaliko and Semwaliko North. All workings are located within a regional WNW structural corridor interpreted from regional aeromagnetic survey. Surface geochemical sampling is currently being conducted to test the entire area.

The Handeni drilling will comprise three separate programs. Phase 1 will consist of reverse circulation ("RC") drilling at Semwaliko North totaling approximately 2,000 m. The RC program has started and a drill rig is on site where it will test the gold mineralization and complete water bores to support the Phase 2 diamond drill

program. Diamond drilling at Magambazi and Magambazi North will total approximately 2,700 m and will also follow up on the RC drilling at Semwaliko North. A reverse air blast ("RAB") Phase 3 program has been planned to target soil geochemical anomalies along the trend that could generate additional diamond drill targets.

Canaco Resources Inc is a technically strong company focused on mineral projects - gold and diamonds - in Tanzania, West Africa and Mexico.

Riverstone Intersects 16.7 g/t Gold over 12 Metres at Karma

March 10, 2008 - Riverstone Resources Inc. (TSXV: RVS; Frankfurt: WKN A0MX39; 3RV) reported a second round of results from the fourth phase of reverse circulation ("RC") drilling on the Kao Main Zone at its Karma project in Burkina Faso, West Africa. Highlights include 16.7 g/t gold over 12 meters, 2.22 g/t gold over 14 meters, 1.18 g/t gold over 26 meters, and 1.28 g/t gold over 20 meters. The Kao Main Zone continues to expand to the northwest, and it is still open to the north and to the northwest and at depth.

This current phase of RC drilling comprised 5,050 meters in 50 holes, most of which was designed to determine further extensions of the shallow oxide gold mineralization at the Kao Main Zone in preparation for an independent resource estimate. Results from holes 100 to 118 were previously reported (February 28, 2008) and significant results from holes 120 to 137 can be viewed on the company's website.

Riverstone is also drilling on the adjacent Goulagou permit, which contains a NI 43-101 compliant indicated resource of 280,000 ounces of gold at a grade of 1.70 g/t and a further inferred resource of 270,000 ounces of gold at a grade of 1.49 g/t. Kao and Goulagou are two of the four contiguous exploration permits included in Riverstone's Karma project, the others being Rambo and Rounga. The Kao Main Zone and Goulagou deposits are approximately 12 kilometres apart, separated by flat terrain. A third Riverstone-owned deposit at Rambo lies midway between the Kao and Goulagou deposits.

Riverstone Resources Inc. has focused on West Africa because the region is known to host world-class gold deposits, including the Obuasi Mine and Bibiani Deposits in Ghana; and the Sadiola and Morilla Deposits in Mali. Riverstone is concentrating most of its efforts in Burkina Faso, a politically stable country adjoining Ghana, because the belts of favorable rocks that host all the major gold deposits in Ghana continue on into Burkina Faso.

MINDORO
RESOURCES LTD.

Update on Mindoro's Nickel Laterite Projects

March 25, 2008 - Mindoro Resources Ltd. (TSXV: MIO; Frankfurt: WKN 906167; OLM) provided an update on its nickel laterite projects. On the Agata North project, a Phase 2 drilling program is underway and 17 drill holes have been completed.

The NI 43-101 resource report is nearing completion and mine planning and permitting are well advanced. The annual production target for the Direct Shipping Ore (DSO) scenario has been revised upwards to one million wet metric tonnes per year. On the Agata South-Delta joint venture project, 186 drill holes have been completed to date. While initial plans are for DSO operations on both projects, due to the large tonnage potential of Mindoro's tenements and evolution of attractive processing technologies, the company is actively evaluating enhanced-value, on-site processing alternatives. To this end, mini-bulk samples have been collected for pilot high-pressure acid-leach (HPAL) testing.

Expanded Global Resource Evaluation on Surigao Tenements:

On February 26, 2008, Mindoro advised that reconnaissance geological mapping of its Surigao District tenements, north of its Agata Project, had greatly expanded their "global" nickel laterite resource potential. Results of the regional mapping program indicate the potential for a further 1,650 hectares of nickel laterite mineralization on the adjacent Tapan Main, Tapan SF and Mat-I tenements, further reinforcing Mindoro's plans to evaluate the feasibility of establishing a local processing plant to maximize economic returns to all stakeholders.

To rapidly assess the potential of this large area, a hand-auger reconnaissance sampling system has been developed to define laterite containing significant nickel values. Eleven holes have been completed to date.

Mindoro Resources Ltd. is carrying out resource delineation at the Kay Tanda epithermal gold-silver prospect and has identified 22 porphyry copper-gold prospects and a nickel laterite prospect in the Philippines.

Mexican Silver Mines Initiates IP Geophysics at Vallecillo

March 25, 2008 - Mexican Silver Mines Ltd. (TSXV: MSM; Frankfurt: WKN A0MSLE; MS2) has initiated a ground induced polarization ("IP") geophysical survey at its Vallecillo Project, in follow up to the Phase 1 drilling program. The layout of the initial IP survey lines has been tied to the results of the company's phase 1 drilling results and the survey will initially target three areas:

The La Magnolia and Carmencita Mines comprise a group of old workings which have returned significant surface sampling results. The company's phase 1 drilling completed a single hole here (V-12) which intersected 1.3 meters of 374 g/t Ag and 12.35% Pb. Two IP lines, each 1,300 meters long and spaced 50 meters apart, will be completed between the mines and both cross the parallel structures that host the two mines.

The Santa Maria and Colorada Mines comprise a group of old workings that have also returned significant results from surface sampling but no drill holes have yet tested this area. Two lines, 1,300 meters long and each spaced 50 meters apart, will be completed to test the response of two parallel structures (800 meters apart on average) believed to host the two mines.

The Dolores Mine is the largest mine in the district, and based on historical information, it is inferred that the mine has produced more than 250,000 tons with grades averaging 2,000 g/t Ag (15 million oz). Holes V-03, V-11 and V-13 have already intersected, and partially delineated at 50 meter centers, a new mineralized manto located 250 meters west of the Dolores shaft. Although results from Hole V-10 are still pending, the hole visibly intersected 2.48 meters of mineralization east of the San Pablo mine, suggesting significant dimensions to this mineralization. Two IP survey lines, each 700 meters long and spaced 50 meters apart, will test this area.

Mexican Silver Mines Ltd. is a junior resource company developing three former silver producing properties in northeastern Mexico.

Drilling Begins on Mount Benedict Property

March 27, 2008 - Silver Spruce Resources Inc. (TSXV: SSE) announced the commencement of diamond drilling on the T-649 and Super 7 showings on the Mount Benedict Property, in the eastern part of the Central Mineral Belt (CMB).

The T-649 and Super 7 are high-grade uranium prospects. At the T-649, five grab samples taken across a 12 to 14 meter wide outcrop of hematite breccia averaged 0.5% (10 lbs/ton) U₃₀₈ and boulders with values over 3.0% (60 lbs/ton) U₃₀₈ were located downstream of the showing. Values varying from a few hundred ppm to 1.0% (20 lbs/ton) U₃₀₈ were located at the Super 7 prospect in limited sampling.

The permit for the pre-drilling magnetometer surveys and diamond drilling on the T-649 and Super 7 showings and the summer work program on the property was received February 22, 2008. As required under the permit, a public information session was held in Makkovik on February 29. A fully winterized camp had previously been established approximately 50 kilometers to the south of Makkovik on Labrador Inuit Settlement Area (LISA) lands. The helicopter supported drilling is being monitored by an Inuit environmental monitor, as required under the permit.

Results for the 2007 prospecting surveys and maps showing the planned drilling on the Mount Benedict Property are on the company's website.

Silver Spruce Resources Inc. is a junior mining exploration company primarily focused on uranium in the CMB of Labrador, Canada.

Las Aguilas East Deposit Continues to Expand

March 12, 2008 - Marafil Mines Ltd. (TSXV: MFM) announced assay results from the final seven diamond drill holes completed in 2007 at the Las Aguilas East nickel-copper-platinum-palladium deposit, San Luis Province, Argentina. **Five of these holes reported sample values exceeding 1.0 g/t platinum.**

Drill hole LA07-063 intersected 7.00 metres grading 1.13% nickel, 0.68% copper, 0.07% cobalt, 0.31 g/t platinum and 0.27 g/t palladium and includes a one-metre interval grading 2.01 g/t platinum and 0.27 g/t palladium.

The Las Aguilas East deposit has been outlined for more than 200 metres along strike and to a 225 metre vertical depth and remains open for further expansion. Drill hole intercepts are spaced approximately 25 metres apart. A total of 67 holes were completed on the Las Aguilas East and West deposits in 2007, totaling 11,028 metres. Of these, 31 holes (5,817 metres) were at the Las Aguilas East deposit. Drill hole results can be viewed on the company's website.

A preliminary resource estimate is in progress; however, because the deposits remain open a complete resource estimate can not be completed until after the resource delineation is completed and the limits of the deposits have been established. Drilling will resume on the extensions of the West and East deposits as well as a number of regional targets in mid-March.

Marafil Mines Ltd. is focused on the exploration of precious and base metals in Argentina. The company has built a portfolio of approximately 20 properties, several of which show bonanza grade gold and silver values.

Happy Creek Drills 10.35 Metres of 1.545% Copper at Rateria Property

March 12, 2008 - Happy Creek Minerals Ltd. (TSXV: HPY) confirmed the presence of a new, large-scale tungsten-molybdenum system on its 100%-owned Fox Property.

Results from 11 of 13 holes drilled over a 1.5km by 500m area include 2.0 metres grading 0.74% tungsten trioxide (W₀₃), 3.0 metres grading 0.34% W₀₃, and 0.50 metres grading 1.80% W₀₃, all from drill hole 07F-05. Molybdenite (molybdenum mineral) also occurs, with results including 1.7 metres grading 0.51% molybdenum (Mo) in hole F07-10. Drilling into the underlying intrusive rock has returned geology and mineralization that suggests the potential for a porphyry molybdenum system to occur.

First pass, widely spaced drilling on the Fox property has identified a new, large scale tungsten-molybdenum system returning significant grades. Importantly, the mineralized system comes to surface, is large in scale, remains open in extent, is within 15 kilometres of hydropower and has excellent road access from a resource-based town.

Happy Creek Minerals Ltd. is engaged in exploration for a variety of metals, including copper, molybdenum, tungsten, gold and silver, all within British Columbia, Canada.

Ongoing Negotiations for Project, Turbine Delivery and Construction Funding

March 18, 2008 - Western Wind Energy Corp. (TSXV: WND; Frankfurt: WKN 157027; WWE) announced it is in ongoing negotiations with several parties regarding funding for the build-out

of the 120 MW Windstar Project in Tehachapi, California. The parties include affiliates of wind turbine manufacturers and national energy companies with current supplies of wind turbines. Also included in the funding discussions is the expansion of the Mesa Project, from 30 MW to 50 MW.

The dynamics of the project economics call for a direct project cost of between \$2.3 and \$2.5 million per MW with a further project developer profit payable to Western Wind Energy for up to \$1 million per MW or up to \$170 million of net present value potential profit payable to Western Wind Energy.

Unlike the financing of Canadian wind energy projects, none of these financing structures in the US involve the sale of corporate equity. The sale of corporate equity is not required in US project finance structures. All equity and potential debt facilities can be done at the project level allowing the corporate parent, Western Wind Energy to remain dilution free during this capital-intensive process.

Western Wind Energy Corp. Western Wind Energy is in the business of acquiring exceptional land sites, capital and technology for the production of electricity from wind energy.

Prize Mining Corporation Acquires Atlin Placer Property

March 10, 2008 - Prize Mining Corporation (TSXV: PRZ; Frankfurt: WKN A0D9T0: MQS1) announced it had successfully exercised its option to acquire a 100% interest in three placer claims and leases pursuant to a purchase option agreement dated April 12, 2007 between Prize and Kotcho Lake Logging Ltd. previously announced by Prize

on April 27, 2007. The purchase price for the Atlin Placer Property was \$450,000 and 1,200,000 common shares of Prize. Of this purchase price, \$50,000 and 1,200,000 shares were paid to Kotcho upon execution of the Option Agreement and the remaining \$400,000 was paid on February 29, 2008.

The Atlin Placer Property is located over or adjacent to Prize's existing hard rock claims on its Atlin gold property, located in Atlin, BC, and comprises approximately 466 acres. Prize has received final acceptance for this acquisition from the TSX Venture Exchange.

Prize Mining Corp. currently has three active projects in Canada: The Pine Creek Bedrock Project located in Atlin, British Columbia, the Muskox PGE Project in Nunavut, and the Red Ridge Property in the Yukon.

RPS Fuels, LLC, Signs Lease Agreement on Price Kentucky Refuse Pile

March 14, 2008 - Radar Acquisitions Corp. (TSXV: RAC) announced that RPS Fuels, LLC, signed a lease agreement with New Vision Energy, LLC, covering the coal waste pond known as the Price Kentucky Refuse Pile and the coal fines waste stream of four deep mines currently in development by New Vision Energy. RPS Fuels is the joint venture company formed by Radar and New Energy USA, LLC, for the development of Re-Fuel™, an engineered solid fuel product incorporating waste coal and biomass.

The Price Kentucky Project site, located in central eastern Kentucky, is permitted for wash plant, refuse mining and refuse disposal. It is accessed via paved roads and has an onsite rail load-out that New Vision Energy is currently reactivating.

Based on the results of RPR Fuels' due diligence on the property, management believes the refuse pile and coal fines waste stream of New Vision Energy's four deep mines will supply enough recyclable material for the economic development of a long-term Re-Fuel™ production facility.

New Vision Energy will be acting as operator of the Re-fuel™ production facility on the Price Kentucky Project site and will be paid a royalty. The royalty will be US\$4.00 per clean ton for each and every ton of 2,000 pounds of coal recovered, or 12 percent of the average gross sales price on all coal recovered and removed, whichever amount is greater.

Radar Acquisitions Corp. is a diversified natural resource development company focused on growth through the acquisition, exploration and development of resources and resource related technologies.
